

## MODEL:ST

### TRUCK UNLOADING: SIMPLE AND EFFECTIVE

Introducing the Ashross-St (stationary unloading system), an innovative machine designed to work hand-in-hand with your belly dump and end dumping trucks.

The Ashross ST is the worlds' first, low profile, electric drive-over material handling system. The ST is portable, with its own set of ramps and can be set up or taken down within hours. The ST is meant to be a stationary unit working with a radial stacker or other conveying system. The ST requires no excavation and is only 32 inches at the top of the drive over ramp. The ST also can handle a wide variety of materials including aggregates, coal, pet-coke, sulfur prills, roller compacted concrete, contaminated materials, low slump concrete, fertilizers, and agricultural products.

#### SPECIFICATIONS:

- LENGTH: 60 ft. ASSEMBLED
- LENGTH OF MIDDLE SECTION-30 ft.
- LENGTH OF RAMPS-15 ft each
- WIDTH: 12 ft.
- ELECTRIC POWER-BELT
