

## Traditional pit unloading system information

We understand that sometimes you want to go with what you know. That is why Ashross now offers full service options for a traditional pit rail car unloading system. We provide the engineered drive over section with rails, the pan feeder, the conveyor coming out of the pit, the electrical requirements for running the systems, the complete set of drawings and instructions for installation.

Because each project is unique and each customer has a unique site, we will give you options with pricing very shortly for different systems that will range from 42 inch discharge conveyors all the way up to a 60 inch discharge conveyor. We are currently putting together these full service packages that we will manufacture for your project so you don't have to source all these different components on your own.

Please come back very soon and you will see the various packages that we are offering to make it easy to complete your system in one place. When you think of rail car unloading system, please know you can find your solution at Ashross.

If you have any questions please call Todd Bergeson at 801-376-9298 on his cell.
